

OCEANTOOLS

Innovative Products & Solutions for use in some of the world's harshest environments

OceanCOMP Hydraulic Pressure Compensator

KEY FEATURES

Available in hard-anodised aluminium or Delrin

Available with analogue level outputs or low-level indicators

Standard sizes 1.5l, 5l, 6.5l, 8l and 9.5l

The OceanTools OceanCOMP range of subsea hydraulic pressure compensators are designed to balance the internal pressure of any subsea hydraulic / oil-filled assemblies to that of the surrounding seawater.

The compensators are available either in hard-anodised aluminium or Delrin housings and utilise a spring loaded rolling diaphragm that maintains a pressure slightly greater than that of ambient. In the case of leakage of the customer's system, this slight over-pressure prevents seawater ingress and thus protects the equipment.
