

PULSE 6X/8X OPTIONS

UNDERWATER CONNECTOR

Underwater connector is available on the coil wire which enables the coil to be removed from the case and optional coils used. This option dramatically increases the versatility of the detector.

8" x 48" OVAL COIL WITH SKIDS AND 100' CABLE

Very large detection area. For dragging along the beach or in shallow water. Good detection of both small and large targets. 10' wide by 8' deep detection envelope for large targets, yet still detects single coins.

16" COIL

Very wide detection area. Excellent sensitivity for larger targets such as cannons, pipelines, anchors or outboard motors.

18" COIL WITH 100' CABLE

Turn your Pulse 6X or 8X into a boat deployed metal detector with this coil/cable assembly. Large detection area. Great for locating large targets! Coil can be mounted on a sled and towed across the bottom.

10" COIL

Wide detection area. Good sensitivity for both medium and large targets.

22" HAND PROBE WITH 1" COIL

Small and highly concentrated detection area at probe tip. Used to probe into soft bottoms or check crevices between rocks, coral heads, or inside wrecks.

CARRY BAG

This rugged cordura nylon bag is specially designed for your JWF detector. Included with 8X.

EXTRA BATTERY

Field installable battery for 6X and 8X.

220 V CHARGER

For European use.

DUAL U/W HEADSET

Stereo headset for u/w use.

There are a variety of options available for the Pulse 6X and Pulse 8X detectors. These options give these detectors a tremendous amount of versatility. With a few different options, your JWF pulse detector can be used on land, at depths of up to 200 feet, or deployed from a boat. There is no detector on the market today that has the power and flexibility of the Pulse 6X and 8X detectors.

Different size coils have different detection ranges. Large coils have very wide and deep detection envelopes for finding larger objects at deeper depths. Small coils have small, but very concentrated, detection envelopes which more easily locate smaller targets.

In order to install any of the optional coils on your Pulse 6X or Pulse 8X detector, it is necessary to have the optional "underwater connector on coil wire". This option allows the standard search coil to be detached from the electronics housing and optional coils to be attached. This option can be installed on any new detector or older Pulse 6X and Pulse 8X models. Call for more info.
